What's new in COCKPIT 5.9 release?

Application Delivery (builds 5.9.1.0 – 5.9.1.4)

- Improved of custom font capabilities in COCKPIT client.
- Improved of icon resolution.
- Improved of icon resolution in desktop shortcut mode.
- Improved of text shadow background image in COCKPIT client.
- Ability to force COCKPIT clients to approve license agreement document before connecting to site.
- Ability to remove multiple hosts in admin console.
- Adding a new tab affinity rules in Admin Console for specific terminal (Exclusive Access).
- Ability to limit user connection to specific terminal (Exclusive Access).
- Adding a dashboard tab in admin console with daily user details. Base on client logs.
- Adds a language bar visibility for RDP applications.
- New utility dialog to create encrypted password for current user (JDsDA).

Secure Browsing (builds 5.9.0.14 – 5.9.0.20)

- An advance favorite synchronization between client and server side in Secure Browsing.
- Ability to add running scripts after installing Secure Browsing.
- Local PDF file open in chrome and IE browsers.

Bug Fixed

- Local PDF file opened in chrome browser remotely with an error message “File not found”.

- Desktop icons published by COCKPIT client doesn't look good in 32 and 64 bits resolution.
- Items text is not looking good (problem with Shadow) on some backgrounds.
- Exclusive access doesn't force user to access to specific terminal.
- Font settings are corrupted after reconnecting to site.
- When connecting to local site (outlook) and clicking on MailTo option it would open outlook remotely and close local browser.
- Pressing on email link closes the browser in Secure Browsing.
- Favorites view does not work properly in single site mode in COCKPIT client.
- Applications 32 bit like SnippingTool.exe sometimes wasn't run after publishing it as RDP application.
